## Key Credit Strengths and Views from Fitch

- Anadolubank's IDRs are driven by its standalone creditworthiness, reflected in its VR, supported by its resilient profitability, adequate capitalisation and limited refinancing risks.

- Above Sector-Average Profitability:** The operating profit/risk-weighted assets (RWAs) ratio improved to 8.3% in 1Q26 from 7.5% in 2025, on the back of improved net fees and commissions and trading income driven by increased business volumes. Net interest margin remained strong at 9.8% and return on average equity reached 44.7%.

- Rapid Growth with Contained Risk:** Gross loan growth of 13% in 1Q26 outpaced the sector average of 8%, with new originations focused on short-term local-currency lending to lower-risk corporates, reducing seasoning risks.

- Adequate Capitalisation:** The CET1 ratio stood at 13.6% at end-1Q26 (end-2025: 16.3%), mainly reflecting the removal of regulatory forbearance and loan growth. Adequate internal capital generation and pre-impairment operating profit equal to 15% of average gross loans provide an additional buffer.

- Limited refinancing risks:** Anadolubank is largely funded by short-term, fairly granular customer deposits, with **77% of total non-equity funding** sourced from customer deposits. Funding diversification is further supported by the **USD150 million subordinated debt issuance**.
